(54) Title: **CRYSTAL STRUCTURE OF AN AURORA KINASE CATALYTIC DOMAIN, AND USE THEREOF**

(57) Abstract: The invention provides crystalline forms of a polypeptide corresponding to the catalytic domain of Aurora kinase. The active site ATP binding pocket is defined by its amino acid residues and their atomic coordinates. This structure may be used to select or design chemical modulators of Aurora kinase, particularly Aurora inhibitors. These modulators may be used to treat diseases of cell proliferation, e.g. cancer.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/GB 02/04589

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 12
because they relate to subject matter not required to be searched by this Authority, namely:
Claim 12 relates to a method of designing a three-dimensional structure. As such a threedimensional structure is merely a form of display of information, subject-matter of the claim is regarded to fall under the provisions of Art. 52(2)d.
2. ☒ Claims Nos.: -
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Present claims 3 and 4 relate to a crystalline polypeptide defined by reference to certain parameters, wherein it is impossible to compare these parameters to what is set out in the prior art. Consequently, a lack of clarity arises to such an extent as to render a meaningful complete search impossible.

Likewise, claims 5 and 16 relate to a crystalline polypeptide defined by the presence of certain parameters, namely individual residues at specific steric coordinates. A comparison of such absolute individual steric coordinates with what is set out in the prior art appears not to be possible and/or meaningful, leading to a lack of clarity to such an extent as to render a complete search impossible.

Moreover, these claims therein relate to an extremely large number of possible compounds, however support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT is to be found only for the specific Aurora A kinase peptide crystals disclosed in the application.

Consequently, the search has been carried out for those parts of the claims which appear to be supported and disclosed, namely those parts relating to a crystalline form of an Aurora kinase.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.

(54) Title: CRYSTAL STRUCTURE OF AURORA-2 PROTEIN AND BINDING POCKETS THEREOF

(57) Abstract: The present invention provides crystalline molecules or molecular complexes which comprise binding pockets of Aurora-2 or its homologues. The invention also provides crystals comprising Aurora-2. The present invention also relates to a computer comprising a data storage medium encoded with the structural coordinates of Aurora-2 binding pockets and methods of using a computer to evaluate the ability of a compound to bind to the molecule or molecular complex. This invention also provides methods of using the structure coordinates to solve the structure of homologous proteins or protein complexes. In addition, this invention provides methods of using the structure coordinates to screen for and design compounds, including inhibitory compounds, that bind to Aurora-2 or homologues thereof.

Title STRUCTURE OF HUMAN AURORA-A
122-403 PHOSPHORYLATED ON
THR287, THR288

Authors Bayliss, R., Conti, E.

Primary Citation Bayliss, R., Sardon, T., Vernos, I., Conti, E. Structural Basis of Aurora-A Activation by Tpx2 at the Mitotic Spindle *Molecular Cell* v12 pp.851, 2003

History Deposition 2003-08-06 Release 2003-10-30

Experimental Method Type X-RAY DIFFRACTION Data
[EDS]

Parameters

Resolution [Å]	R-Value	R-Free	Space Group
2.75	0.257 (obs.)	0.296	P 6 ₁ 2 2

Unit Cell

Length [Å]	a	b	c	Angles [°]
81.18	81.18	169.62	alpha 90.00 beta 90.00 gamma 120.00	

Molecular Description Asymmetric Unit monomer (protein 282 residues)
Polymer: 1 Molecule: SERINE/THREONINE KINASE 6
Fragment: CATALYTIC DOMAIN, RESIDUES 122-403 Chains: A; EC No.: 2.7.1.37 Other Details: PHOSPHORYLATED ON THR287, THR288

Functional Class Kinase

(54) **Crystals of an aurora-a tpx2 complex, tpx2 binding site of aurora-a, aurora-a ligands and their use**

(57) The present invention relates to crystals of phosphorylated Aurora-A kinase fragment alone and in complex with a ligand, amino acid residues 1-43 of human TPX2. This invention also relates to methods for designing and selecting ligands, in particular allosteric inhibitors of Aurora-A, that bind to the Aurora-A kinase and their use. Further, the present invention relates to certain indene and indole derivatives. The present in-

vention relates to crystals of phosphorylated Aurora-A kinase alone and in complex with a ligand, amino acid residues 1-43 of human TPX2. This invention also relates to methods for designing and selecting ligands that bind to the Aurora-A kinase and their use. Further, the present invention relates to certain indene and indole derivatives.

INCOMPLETE SEARCH
SHEET C

Application Number
EP 03 02 3136

Claim(s) not searched:
6-8

Reason for the limitation of the search (non-patentable invention(s)):

Article 52 (2)(d) EPC - Presentation of information

Further limitation of the search

Claim(s) not searched:
10-12, 24-26

Reason for the limitation of the search:

Claims 10-12 and 24 (in part) relate to compounds defined as modulators or allosteric inhibitors, which bind to any of a number of residues of Aurora-A. The claims cover all such compounds, whereas the application provides support within the meaning of Article 84 EPC and disclosure within the meaning of Article 83 EPC no such compounds. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search is impossible. Independent of the above reasoning, the claims also lack clarity (Article 84 EPC) as an attempt is made to define the compounds by reference to a result to be achieved. Again, this lack of clarity in the present case is such as to render a meaningful search impossible.

The same objection applies to claims 25 and 26, insofar as they relate to uses of the compounds according to claims 10-12.

European Patent
Office

Application Number

EP 03 02 3136

CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

- ☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
- ☐ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:
- ☒ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:
- 1-5, 9

European Patent
Office

LACK OF UNITY OF INVENTION
SHEET B

Application Number
EP 03 02 3136

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. claims: 1-5, 9

A crystal of phosphorylated Aurora-A kinase complexed with
human TPX2

2. claims: 13-26

Indole and indene derivatives and their uses

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 03 02 3136

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.

Marked Documents lets you save documents you find useful. To add documents to your marked items:

- With Results displayed--Select the check box to the left of a document title.
- With a document displayed--Select the "mark document" check box on the document display page.

Once you have documents marked, you can create your bibliography, email marked documents, export citations, or create a web page with links to your articles.

* The maximum number of documents you can save is 50.
